

Construct a pedestrian bridge that will safely allow for continuous flow of pedestrian traffic over Barstow Ave.

CURRENT CHALLENGE:

Currently the cross walks on Barstow are a never ending stream of students walking directly into traffic while on their cell phones. This results in traffic backed being backed up past Cedar Ave. I have notice at some of the peak times Fresno State Officers are their directing traffic, however there are many times officers cannot be there to ensure the safety of students/pedestrians.

PROPOSED SOLUTION:

A pedestrian bridge that will safely allow for continuous flow of pedestrian traffic over Barstow Ave. This will also alleviate the motor traffic congestion along Barstow and free up the Fresno State Office for more important tasks.

BENEFITS TO FRESNO STATE:

Will keep students safe, and ensure efficient use of resources i.e. Police officers time.
